

Taking care of our Environment

Recycling

Our extensive recycling facilities help to reduce our impact on landfill. We also use Forest Stewardship Council (FSC) materials across our businesses.

Electricity

Our electricity is generated from renewable sources. We use energy-saving lightbulbs and technology that enables us to optimise our voltage usage.

Water

Our on-site water purification systems allow us to filter our own water and reduce plastic bottle usage.

Ethical Food

The food we use in our kitchens is ethically sourced and, as far as possible, seasonally and locally produced.

Bees

We're committed to helping reverse the declining bee population by homing over 500,000 honeybees across our three venues.

Composting

We compost our food with the aim to achieve 0% landfill waste by 2021.

Green Meetings

We offer customers green meeting packages to offset the carbon emitted from their event. We also provide financial incentives for delegates who car share or travel by public transport to our venues.

Low Carbon Emissions

Our environmental policies, strategies and impacts are submitted to CDP, an independent organisation dedicated to driving sustainable economies. We achieve high benchmarked CDP scores.
